

Twelve Principles of Scientific Integrity

Become interested in everything

Respect nature in all that you do

Continually expand your domain of awareness

Use the full intelligence of your human faculty

Seek not just knowledge but understanding

Share your discoveries prudently with others

Do no harm

Never act against your conscience

Do not interfere with the natural order of life

Never assume that there is not more to know

Do not draw conclusions without thorough investigation

Never believe anything that you cannot prove for yourself
